

CAR WASHING – HELP PROTECT OUR WATERWAYS

When washing your car at home, please be aware that soap, scum and oily grit often drain off of your driveway, eventually making their way into our waterways and degrading their quality. Please do your part to help protect our waterways, and wash your car on grass or gravel instead of a paved driveway or street, or take it to a carwash where the polluted water is typically treated and reused.

If you have any questions regarding stormwater runoff or the effects of associated pollutants on our waterways, please contact the Southeast Regional Office of the Pennsylvania Department of Environmental Protection at 484-250-5900.
